## SUMMARY

My research focuses on using mechanics, applied mathematics, and computational science to understand and represent the complex behavior of materials, e.g., crack propagation and multiphysics effects in materials and particle breakage and interlocking in granular media. My research expertise and interests include mechanics of solids and granular media, multiphysics and multiscale modeling of engineering and biomedical systems, uncertainty quantification, and applications and advancement of neural networks to engineering problems.

## MAJOR PROJECTS (* – ONGOING, ** – COMPLETED)

- *\***Bayesian calibration and inverse problems in mechanics** (at UT Austin)
  - Proposed a Bayesian inference method for the calibration of PDE-based models; the method employs goal-oriented a-posteriori estimates of modeling error JhaOden-JCP-2022
  - Faster MCMC parameter sampling by utilizing computationally cheaper approximations of the error in QoIs
  - Enhancing the application of the neural operator to Bayesian inverse problems by computing correction to neural operator prediction CaoRoseberryJha-Residual-2022
  - Significantly improved performance when correcting the neural operator predictions (examples include nonlinear Poisson equation and hyperelasticity)
- *\***Multiphysics modeling of tissue-scale tumor growth** (at UT Austin)
  - Developed a 3D-1D model of tumor growth and angiogenesis, coupling the evolution of tumors with the flow in tissue and vascular network Nonlin-2021, CMAME-2021
  - 1D Poiseuille flow model and Darcy's law to simulate the flow in a vascular network and tissue domain, respectively
  - Evolution of tumors, proteins, and drugs based on continuum mixture theory and phase-field method
- *\***Optimal experimental design for Hyperpolarized (HP) MRI** (at UT Austin)
  - Determining HP scan parameters (design parameters) such as flip angles and repetition times is non-trivial due to the signal decay and instantaneous signal loss during a scan
  - Proposed a method based on mutual information to determine the optimal design parameters that increase the information content of data JhaFuentes-MRM-2022
  - Received a grant of $50k as a co-PI (D. Fuentes as PI) for the duration of Sep 2020 – Mar 2022
- *\***High-fidelity mechanics model for granular media** (at UT Austin)
  - Discrete Element Method (DEM) based models are restricted to spherical particles and can not simulate particle breakage
  - Combined peridynamics (nonlocal theory of fracture) and DEM and proposed a novel high-fidelity model called PeriDEM that overcomes the limitations of DEM-based models JMPS-2021
  - Open-source software available on GitHub (PeriDEM)
- *\***Relating peridynamics and classical linear elastic fracture mechanics (LEFM)** (at UT Austin and LSU, Baton Rouge)
  - Connecting LEFM and peridynamics is of great interest for the validation and broader integration of peridynamics
  - We showed that peridynamics satisfies the LEFM energy relation JhaLipton-IJFrac-2021, LiptonJha-Nonlin-2021LiptonJha-JPER-2019
  - In the absence of fracture, peridynamics approximates elastodynamics JhaLipton-IJNME-2018
  - Obtained a CFL-like stability condition for an explicit time discretization of peridynamics JhaLipton-IJNME-2018
- **\*\*Numerical method and analysis of peridynamics theory of fracture in solids** (at LSU, Baton Rouge)
  - Implemented and studied numerical methods such as finite difference and finite element for peridynamics JhaLipton-SINUM-2018, JhaLipton-DCDSB-2021, JhaLipton-CMAME-2019
  - Showed that the numerical solution converges to the exact solution as expected (an important contribution as such results were not clearly established before our work)
- **\*\*Multiscale modeling of electrical interaction in ionic solids** (at CMU, Pittsburgh)
  - Coulombic interactions are long-ranged, and it is challenging to integrate them with multiscale methods, e.g., Quasicontinuum (QC) method
  - Obtained a continuum limit approximation of Coulombic (electrostatic) interaction and utilized the limiting energy to develop a QC method with electrostatic interaction JhaMarshallKnapDayal-Multiscale, JhaDayal-ContinuumLimit, Jha-PhDThesis-2016
- **\*\*Discrete-to-continuum limit of electrostatic interaction in nanostructures** (at CMU, Pittsburgh)
  - Performed a rigorous derivation of continuum limit of electrostatic interaction in nanostructures with rotational and translational symmetries JhaDayal-ContinuumLimit
  - Unlike in the case of 3D crystal structures, the limiting electrostatic energy in nanostructures is local

- The limiting energy includes contributions from both the tangential and normal components of the dipole moment field; tangential components not present in the limiting energy obtained through dimensional reduction techniques
- **\*\*Monolithic fluid-structure interaction (FSI) formulation** (at IISc, Bangalore)
  - Developed a monolithic arbitrary Lagrangian-Eulerian (ALE) formulation for FSI problems
  - Compressible fluid and nonlinear solid undergoing large deformation
  - Mapped the Navier-Stokes equations for compressible fluid to the reference configuration
  - Developed energy-conserving time discretization and finite element spatial discretization of nonlinear coupled partial differential equations

## PROFESSIONAL ACTIVITIES

▷ **Conference Organization**

• With colleagues, organized (as the main organizer) a USACM thematic conference on computational oncology. Jan 2022. Conference site.

• Co-organizing a minisymposium on "Integrating Machine Learning and numerical methods to accelerate engineering design" at 2nd IACM MMLDE-CSET. Sep 2023.

• Co-organizing a minisymposium M403 on "Uncertainty Quantification for Learning and Data-Driven Predictive Modeling of Complex Systems" at the 17th U. S. National Congress on Computational Mechanics. Jul 2023.

• Co-organized a minisymposium M19 on "Nonlocal models in mathematics and computation" at the SIAM TX-LA 3rd Annual Meeting. Oct 2020.

▷ **Mentoring**

• Co-mentored a student working on the development of distributed solver for a nonlocal diffusion equation. Google Summer of Code 2020. Related github repository. Summer 2020.

## OPEN-SOURCED SOFTWARE

• **PeriDEM.** Implementation of high-fidelity model (PeriDEM, JMPS 2021) of granular media.

• **NLMech.** Peridynamics simulation library. (With P. Diehl).

• **BayesForSEIRD.** Bayesian calibration and validation of the SEIRD epidemic model. (With L. Cao).

• **Angiogenesis3D1D.** Angiogenesis and tumor growth using 3D-1D model. (With T. Köppl, A. Wagner, M. Fritz).
